How to Add a CNAME Record in cPanel

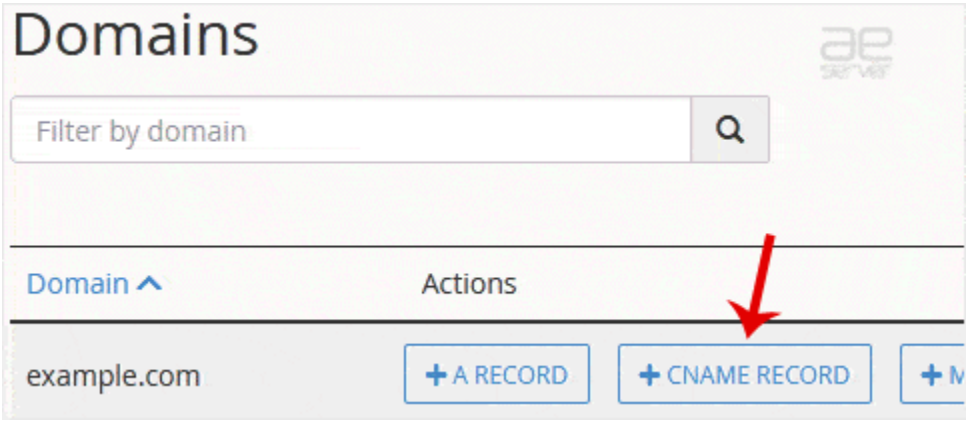
cPanel Control Panel · https://www.aeserver.com/support/how-to-add-cname-record-in-cpanel-using-the-dns-zone-editor/

CNAME records are referred to as alias records since they map an alias to its canonical name. You can add a **CNAME Record** using the cPanel's Zone Editor option.

1. Log in to your cPanel account.

2. In the **Domains** section, click on **Zone Editor**.

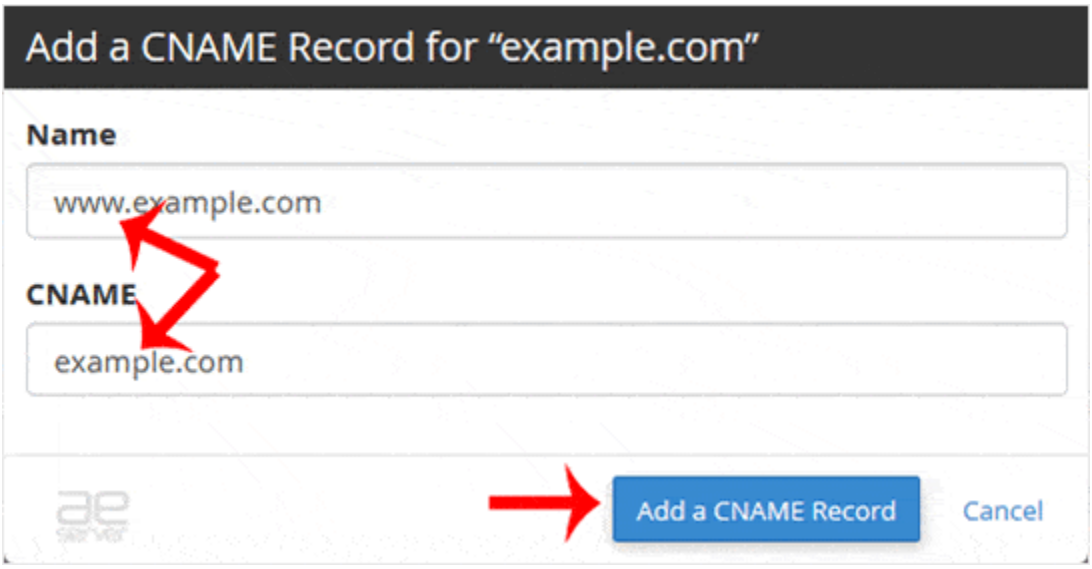
3. Under **Domains**, you can see many options below **Actions**.



4. Click on **CNAME Record**, and a popup box will open. Please, enter the required details in it.

Name: Enter the name you wish to add, such as **www**, and the cPanel will automatically add a domain name like www.example.com.

CNAME: Enter the domain name.



5. Now, click on **Add a CNAME Record**.

If the record is added successfully, you will see a success message.

Note: It may take anywhere from 12 to 24 hours for the changes to take effect worldwide.
