Transfer a domain to another user (internal transfer)

Domain Transfer · https://www.aeserver.com/support/transfer-a-domain-to-another-user-internal-transfer/

Want to transfer a domain to a different user in AEserver? Please check out the guidelines below.

There are two different ways to do that:

Option 1: No Documents Required

- You can get the **EPP code** of the domain and visit the link below to start the transfer: **https://my.aeserver.com/cart.php?a=add&domain=transfer**

****The cost for this will be the same as the renewal charges of the domain. The domain will also get renewed for another year, free of cost.**

(The free renewal applies only where explicitly stated and where the domain name transfer cost is not = 0 (i.e does not apply for domains with a free transfer option such as .ae)

To get the **EPP code**, please log in to the client area and open a ticket to technical support for the EPP code request.

Option 2: Documents Required

1. Completely filled out form - Domain Transfer Declaration (contact support to get the form)

2. Confirmation of the request for Transfer from both the Registrant contact and the proposed Registrant (other account holder must open a ticket mentioning that he is expecting a domain transfer)

Once you have the above, please go ahead and open a Ticket and submit the documents there.

https://my.aeserver.com/submitticket.php

Kindly note that this process takes around 24-48 hours to be processed.
